Are You Ready?
A Medical Respite and Sobering Center’s Response to Emergencies

Alice Moughamian, RN,CNS
Megan Kennel, RN, MSN
Objectives

• Provide an overview of the Medical Respite and Sobering Center (MRSC)
• Describe MRSC’s original role in Emergency Preparedness measures
• Describe the evolution of MRSC’s place in the continuum of care
• Describe challenges
• Moving forward
Medical Respite and Sobering Center – Who are we?

- 2 programs under 1 roof with 2 distinct purposes
- Medical Respite Program overview
- Sobering Center overview
Sobering Center: Already existing role

- Bay to Breakers
- Pride Weekend
- New Year’s Eve
- Reddinet
Sobering Center: Cold Snap

- San Francisco Cold Snap protocol
- Extra chairs and mattresses down during cold and rainy nights
The Evolution Begins…CPMC Power Outage

- April 2017 - Sudden power outage at community hospital, clients being transferred to ZSFG (Zuckerberg San Francisco General Hospital, SF safety net hospital)
- ZSFG needed to take clients from a community hospital.
  - MRSC licensing
  - Where do we fit into this, what clients can we take
  - Prioritizing needs of homeless clients
Crissy Field Rallies – August 2017

SF, protesters brace themselves for far-right rally at Crissy Field

San Francisco Health Network

SAN FRANCISCO DEPARTMENT OF PUBLIC HEALTH
Crissy Field Rallies

- Medical Respite is called to offload clients from hospitals to make space for possible trauma clients – fears of violence post-Charlottesville rallies
- Had available beds because we were in our expansion
  - Physical Beds and public health nurses in the community
- Discharged clients, worked with shelter health
- Use of sobering beds
- Almost needed extra Sobering support
Record-breaking Heat Wave – Sept 2017

“The coldest winter I ever spent was a Summer in San Francisco” – Anonymous

It was downtown San Francisco that, somewhat unexpectedly, set the most prominent high, recording 106 degrees by late Friday afternoon. That eclipsed the city’s all-time-high reading of 103 degrees, set in 2000. The predicted high in San Francisco on Friday had been 88.

“This was the highest reading since records were first kept there in 1874,” National Weather Service meteorologist Duane Dykema said Friday afternoon. “That’s the oldest climate station in California. That’s a significant record.”
Sobering Center as a Cooling Center

- Labor day weekend
- 2% of homes in SF have air conditioning
- Work with street medicine to bring people in
- Lesson learned: Existing infrastructure wasn’t sufficient
- Brought in portable AC’s, fans
- Preparations for upcoming year already in progress
North Bay Fires – October 2017

- Clients could present to Sobering to rest inside away from poor air quality
- Worked with Street Medicine and HOT to bring clients indoors
- Similar to cooling center response
Hepatitis A outbreak among homeless a byproduct of California’s housing crunch

To get ahead of hepatitis A epidemic, SF to vaccinate citizens of streets

- Assessing all clients on admit to Sobering
- Working with IZ and Communicable Disease in SF for vaccinations
- Requiring Hep A on admit for respite
MRSC as a partner at EOC

• Part of city-wide heat wave debrief
• Roles now defined for:
  • Emergency preparedness
  • Natural disaster response
  • Outbreak mitigation
  • System level support
• Expected to be present for EOC planning
• Being added for radio capability
• Setting up a Clinician Disaster Training for all of Respite and Sobering clinical staff
• As a program, we are updating our disaster protocols
• Last week’s response to strike at community hospitals
Lessons Learned

• Supporting program infrastructure
• Adding additional Sobering beds (5 mattresses, 5 chairs): learned how to prioritize who goes to which chair, how to make space
• Maintaining EMS drop off capability
• LLOC clients to Respite in times of need (prioritize already referred clients)
• Limitations in communicating without being on city EMR
Moving Forward

• Ensure that people experiencing homelessness are also cared for in times of disasters
• Public health community-based programs CAN provide this support:
  • be called upon to support city-wide emergency response efforts!
• Community HCH programs should be prepared to assist in a disaster
  • Facility example
